

KRISNIA CALYSTA SIAHAAN

Undergraduate Students

Information System | Del Institute of Technolog

OBJECTIVE

Information Systems student specializing in UI/UX design and data analysis to build user-centered, data-driven digital solutions. Proven track record at PT Dayamitra Telekomunikasi Tbk (Mitratel), where I enhanced internal applications for the Project Management Office (PMO). Proficient in designing intuitive interfaces, conducting system analysis, and extracting actionable insights using Python and SQL. Passionate about bridging the gap between design and technology.

SKILLS

● Coding & Tech Stack

SQL, Python, PHP (Laravel), Pentaho Data Integration, Git/GitHub, Microsoft Excel.

● Design & Analysis

Analytical Thinking, Requirements Engineering, System Requirements Analysis, Database & System Modeling, User-Centered Design.

● Data & Tools

Tableau Public, Data Cleaner, Visual Data Storytelling, Data Cleansing, ETL Pipelines.

● Core Competencies

Critical Thinking, Effective Communication, Group Collaboration, Cross-functional Teamwork, Qualitative Data Synthesis.

EDUCATION

Institut Teknologi Del | 2022 – 2026 Bachelor of Information Systems

A final-year student specializing in Data Analytics and Systems Analysis, focused on bridging the gap between user-centered design, data-driven insights, and technology.

EXPERIENCE

Data Analytics & Business Intelligence

2023 – 2024

Designed dimensional models and built ETL pipelines using Pentaho Data Integration to clean and consolidate student admission data (2023–2024). Developed interactive Tableau dashboards—utilizing Venn diagrams, Tree Maps, and Bar Charts—to visualize applicant distribution across selection tracks and support data-driven decision-making.

Global Healthcare ROI Data Story Visualization

2025 – 2026

Conducted visual data storytelling on global healthcare expenditure and life expectancy datasets using Tableau. Analyzed spending inefficiencies and the concept of diminishing returns across countries, creating comparative dashboards to communicate investment efficiency and insights effectively.

Undergraduate Thesis Research on Generative AI

2025 – 2026

Investigated the integration of Generative AI (GenAI) within the customer discovery phase of software startups. Developed data cleaning and filtering pipelines, evaluated data usage patterns via the HACAF framework, and synthesized insights from academic literature and interviews with startup practitioners.

Facility Maestro IT Del (Group Web Project)

2024 – 2025

Collaborated in a team environment using GitHub to design and develop a web-based facility management system using Laravel. Conducted requirements analysis and database modeling to build a centralized platform that streamlines facility borrowing and tracks real-time item availability.

Digital Cafe Management System (Del Corner Cafe)

2024 – 2025

Performed requirements engineering, business process analysis, and system modeling to address manual operational challenges for Del Corner Cafe. Designed an integrated blueprint to digitize core operations, streamline order processing, and automate transaction tracking to improve service efficiency.
